Cryptocurrency now

Author-Kritika

A cryptocurrency (or crypto currency) is a digital asset designed to work as a medium of exchange wherein individual coin ownership records are stored in a digital ledger or computerized database using strong cryptography to secure transaction record entries, to control the creation of additional digital coin records, and to verify the transfer of coin ownership.[1][2] It typically does not exist in physical form (like paper money) and is typically not issued by a central authority. Some cryptocurrencies use decentralized control as opposed to centralized digital currency and central banking systems.[3] When a cryptocurrency is minted or created prior to issuance or held on a centralized exchange, it is generally considered centralized.[4] When implemented with decentralized control, each cryptocurrency works through distributed ledger technology, typically a blockchain, that serves as a public financial transaction database.[5]

Bitcoin, first released as open-source software in 2009, is the first decentralized cryptocurrency.[6] Since the release of bitcoin, over 6,000 altcoins (alternative variants of bitcoin, or other cryptocurrencies) have been created.

Always think positively

The beautiful thing about life is, that we will never reach an age where there is nothing left to learn, see or be; it's magical really

Be kind.

It would be very kind if you dont write abusive content in the comment section.

Think Before Your Write

Short words are best, and old words, when short, are best of all." Thus, quoting Winston Churchill, began an editorial in The Economist that consisted entirely of one-syllable words.
